## Skills

**Programming languages:** Go, JS, Kotlin, Java

**Technologies, tools & software:** Linux, Bash, Git, GitHub, Vim, IntelliJ IDEA, SQL, REST, gRPC, PostgreSQL, MySQL, Vue.js, CI/CD, HTTP, Docker, Nginx

## Career Summary

**December 2021 – present**  
**Max Group, Moscow**  
**Web developer**

<http://max-moscow.com>

### Project description:

The product of the company is a large and long-term working merchandising management system used by a large number of global retailers (FMCG, pharmaceutical industry). The system has a huge amount of data and complex business logic. The backend interacts with mobile applications and the frontend via JSON API.

### Responsibilities:

- Maintenance and development of a backend microservice system written in Go.
- Participation in the system design process.

### Key achievements:

- Improved the performance of one of the most complex system endpoints.
- Proposed and implemented a CI/CD pipeline for backend and frontend services.

**August 2021 – December 2021**  
**Freelance Go Developer**

### Responsibilities:

Maintenance and development of several projects with different technologies (distributed systems, artifact repository management).

## Education

Samara National Research University  
Institute of Engine and Power Plant Engineering, Power engineering, Bachelor, 2018

## Languages

Russian, English
