Summary

Junior Go developer with one plus year experience. I am currently looking for a developer position where I can grow professionally. I have no experience of commercial development. But I have created a number of projects in which I have gained experience with the necessary technologies. I am interested in open source and have been involved in several projects.

Skills

Programming languages: Go, Kotlin, Java
Technologes, tools & software: Linux, Bash, Git, GitHub, Vim, IntelliJ IDEA, Android Studio, SQL, REST, gRPC, PostgreSQL, CI/CD, HTTP, Docker

Valuable projects

g4s8/Gitstrap - CLI for managing GitHub resources.

https://github.com/g4s8/gitstrap

Gitstrap automates routine operations with Github. It can create and configure Github repositories, teams, readmes, organizations, etc from yaml specification files. I am involved in this project as a collaborator.

Update wiki – GitHub Action to update repository's wiki with changes from main repository.

https://github.com/marketplace/actions/update-wiki

A GitHub action that syncs the documentation stored in the project repository with the wiki. It is currently used in Gitstrap and several open source projects.
